REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art does not disclose or suggest a processor in communication with a pump to depressurize the load lock volume by the pump from a first pressure to a second pressure, the processor also being arranged to control the temperature conditioned structure such that the object is at a predetermined temperature that is higher than said desired temperature when said processor starts depressurizing said load lock volume in combination with all the other elements recited in independent claim 1.

The prior art does not disclose or suggest wherein said support unit is constructed and arranged to substantially protect said object from a gas flow against a surface of said object when said load lock volume is depressurized in combination with all the other elements recited in independent claim 5.

The prior art does not disclose or suggest a processor in communication with a pump to depressurize said load lock volume by said pump to a predetermined first pressure, to wait during a predetermined time period and then to depressurize said load lock volume to a predetermined second pressure in combination with all the other elements recited in independent claim 7.

The prior art does not disclose or suggest wherein said support structure comprises a stationary body and is arranged to rotate said body in use within said stationary body, said body and said stationary body defining a gap between them that is in communication with said volume, said stationary body having lines allowing a temperature controlled fluid to flow therethrough in combination with all the other elements recited in independent claim 10.

The prior art does not disclose or suggest said support structure being constructed and arranged to control the temperature of the object via said gas in said volume to a desired temperature at least before said object is transferred from said load lock towards the lithographic projection apparatus, and a processor in communication with a pump to depressurize the load lock volume by the pump from a first pressure to a second pressure, the processor also being arranged to control the temperature of the gas such that the object is at a predetermined temperature that is higher than the desired temperature when said processor starts depressurizing said load lock volume in combination with all the other elements recited in independent claim 25.

The prior art does not disclose or suggest controlling the temperature of the substrate via a gas in a volume between the substrate and the support structure such that the substrate is at a desired temperature at least before said substrate is transferred from said load lock towards the lithographic projection; and depressurizing a load lock volume by a pump from a first pressure to a second pressure with a processor, the processor arranged to

control the temperature of the gas such that the substrate is at a predetermined temperature that is higher than the desired temperature when the processor starts depressurizing the load lock volume in combination with all the other steps recited in independent claim 28.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
